

Niranjan Shashikant Magare

Pune, India | +91 8149574425 | niranjan.magare@gmail.com | [linkedin.com/in/niranjanmagare](https://www.linkedin.com/in/niranjanmagare)

SKILLS

Languages: TypeScript, JavaScript, SQL

Technologies & Tools: NestJS, GraphQL, Express.js, Hapi.js, Docker, REST, PostgreSQL, MongoDB, Redis, AWS EC2,GCP (CE)

PROFESSIONAL SUMMARY

- Senior Backend Engineer with 6+ years of experience designing and scaling high-performance, distributed backend systems using **Node.js, NestJS, TypeScript, GraphQL, REST, and Microservices architecture** for enterprise and IoT platforms.
- Achieved **35–50% performance improvements** by architecting and optimizing **microservices-based distributed systems**, implementing **Redis distributed caching, federated GraphQL services, tenant-aware system design, and optimized PostgreSQL/MongoDB data layers**, with containerized deployments on **AWS EC2 and GCP Compute Engine** using **Docker and CI/CD pipelines**.

WORK EXPERIENCE

Globant | Software Engineer | Pune

May 2024 – Present

- Engineered a **multi-tenant ticketing backend system** supporting multiple entertainment brands, designing tenant-aware booking workflows, event discovery, and transactional flows, integrated with external event services and **Identity Provider (IdP)** for authentication, while ensuring data consistency using **PostgreSQL + TypeORM** and low-latency responses via distributed caching.
- Contributed to a **federated GraphQL microservices architecture** powering the SEVEN digital ecosystem, building scalable **NestJS/TypeScript backend services** behind **Google Apigee (API Gateway)**; integrated **Adobe Experience Manager (AEM)** CMS data, implemented domain transformation layers, and optimized high-traffic APIs using **Redis caching and performance tuning strategies**.
- Drove AI experimentation initiatives by building a **local RAG-based LLM system** using **Ollama, vector embeddings, and vector databases**, implementing document chunking, embedding pipelines, semantic retrieval, and contextual response generation — exploring **AI agents and multi-agent architectures** for scalable knowledge systems.

Birbal AI Tech (CronJ) | Software Engineer | Bengaluru

Nov 2023 – May 2024

- Led backend development for **Tejas Reporting Tool**, designing scalable **REST APIs** using Node.js, Express.js, and Sequelize with automated **cron-based data pipelines**.

Network Components Pvt Ltd | Software Engineer | Pune

Dec 2019 – Oct 2023

- Architected a **centralized IoT platform managing multiple smart devices**, implementing **REST and MQTT-based real-time communication** across multiple protocols.
- Built **SaaS IoT & Home Automation systems** using Node.js, MongoDB, and Docker; mentored engineers and improved backend scalability and code quality.

Project Work

Qiddiya Platform – Multi-Tenant Ticketing System (Globant)

- Engineered **multi-tenant microservices architecture** using **NestJS, TypeScript, and Federated GraphQL (Apollo Federation)**, integrating **Adobe Experience Manager (AEM), IdP authentication, and downstream booking services** to enable end-to-end ticketing across multiple brands (SEVEN, AQUARABIA, SIXFLAGS).
- Improved high-traffic booking API performance by **35–50%** through **Redis distributed caching, cache invalidation strategies, query optimization, and scalable deployments on GCP Compute Engine**, ensuring low-latency and transactional consistency.

Tejas Reporting Tool – NMS/EMS Network System (Birbal AI Tech (Cronj))

- Led backend development of a **scalable RESTful reporting system** using **Node.js, Express.js, Sequelize, and MongoDB/PostgreSQL**, supporting large-scale **network monitoring (NMS/EMS)** environments

CLOUZER – SaaS-Based IoT Cloud Platform (Network Components Pvt Ltd)

- Architected a **microservices-driven SaaS IoT platform** using **Node.js, Hapi.js, MQTT, MongoDB, Docker, and Nginx**, enabling real-time and asynchronous device communication across REST, MQTT, TCP, and UDP protocols.
- Delivered scalable backend infrastructure with containerized deployments and protocol abstraction layers, improving device communication efficiency and platform reliability across distributed IoT environments.

Wellpremier / Welltech – IOE Home Automation System (Network Components Pvt Ltd)

- Developed a **real-time Home Automation backend** using **Node.js, Hapi.js, LokiJS, MQTT, and Socket.IO**, integrating third-party systems like **Crestron, Lutron, Control4, and Savant** for seamless smart device orchestration.
- Implemented multi-protocol communication (REST, MQTT, TCP/UDP) and backend APIs for sensor data processing, ensuring reliable device control, secure data handling, and production-ready deployments with Nginx and shell scripting.

EDUCATION

M.Sc. Computer Science		7.6 CGPA		MES Abasaheb Garware College, Pune (2018–2020)
B.Sc. Computer Science		6 CGPA		MES Abasaheb Garware College, Pune (2015–2018)
