PROFESSIONAL SUMMARY

- Senior Software Engineer with 6.5 years of experience building distributed, high-performance systems using Node.js, NestJS, TypeScript, GraphQL, Apollo Federation, and Microservices.
- Improved API performance by 35–50% through Redis caching, federated GraphQL optimization, and scalable PostgreSQL data architectures.
- Built AI-powered solutions using Ollama, RAG, vector embeddings, semantic retrieval, and LLM integrations.
- Delivered enterprise-scale platforms across Ticketing, SaaS, IoT, and Home Automation domains.
- Experience mentoring engineers, collaborating with cross-functional teams, and contributing to architecture and design decisions for enterprise-scale applications.

SKILLS

- **Languages:** TypeScript, JavaScript, SQL
- **Backend & APIs:** Node.js, NestJS, Express.js, Hapi.js, GraphQL, Apollo Federation, REST APIs, Microservices, Amazon API Gateway
- **Databases & Caching:** PostgreSQL, MongoDB, Redis, TypeORM, Sequelize
- **Cloud & AWS:** S3, EC2, CDN (CloudFront), Lambda, SNS, SQS.
- **AI & LLM:** Ollama, LangChain, RAG (Retrieval-Augmented Generation), Vector Databases, Text Embeddings, Semantic Search, LLM Integration, AI Agent Development, Prompt Engineering
- **DevOps & Architecture:** Docker, AWS, CI/CD, GitHub Actions, Nginx, Distributed Systems, Event-Driven Architecture, Message Queues, MQTT, Multi-Tenant Architecture, System Design, Kafka
- **Tools & Testing:** Git, GitHub, GitLab, Postman, Bruno, Jest, Unit Testing, Integration Testing, API Testing

EXPERIENCE & KEY PROJECTS

Globant | Senior Software Engineer | Pune |

May 2024 – Present

- Federated GraphQL & Multi-Tenant Ticketing (Qiddiya Platform): Developed NestJS/TypeScript microservices using Apollo Federation for a multi-tenant ticketing platform serving SEVEN, AQUARABIA, and SIXFLAGS brands, integrating AEM, IdP authentication, and downstream booking services through Amazon API Gateway.
- Performance Optimization: Improved high-traffic booking API performance by 35–50% through Redis distributed caching, cache invalidation strategies, query optimization, and PostgreSQL + TypeORM data consistency on Amazon EC2
- AI Innovation (RAG):
 - Built a local RAG-based LLM system using Ollama, vector embeddings, and semantic retrieval.
 - Implemented document chunking and embedding pipelines, and explored multi-agent architectures for contextual response generation.
 - Received the Extra Mile Award for AI innovation.

Birbal AI Tech (CronJ) | Software Engineer (SDE3) | Bengaluru |

Nov 2023 – May 2024

- Tejas Reporting Tool (NMS/EMS): Contributed to the development of scalable RESTful APIs using Node.js, Express.js, Sequelize, and PostgreSQL for network monitoring and reporting systems. Implemented cron-based data ingestion workflows to collect and process monitoring data from multiple sources.

Network Components Pvt Ltd | Junior Software Engineer | Pune |

Dec 2019 – Oct 2023

- CLOUZER – SaaS IoT Platform: Architected a microservices-driven cloud IoT platform using Node.js, Hapi.js, MQTT, MongoDB, Docker, and Nginx. Enabled real-time and asynchronous device communication through REST, MQTT, TCP, and UDP protocols with containerized deployments.
- Wellpremier/Welltech – IoT Home Automation: Built real-time backend with Node.js, Hapi.js, Socket.IO, and MQTT integrating Crestron, Lutron, Control4, and Savant smart systems, Mentored junior engineers, conducted code reviews, established engineering best practices, and influenced key architectural decisions.

AWARDS & RECOGNITION

- Extra Mile Award – Globant | Awarded for AI experimentation and innovation initiative.
- Employee of the Month – Globant | Recognized 4 times for engineering excellence and high-impact delivery.

EDUCATION

- M.Sc. Computer Science | 7.6 CGPA | MES Abasaheb Garware College, Pune | 2018 – 2020
- B.Sc. Computer Science | 6 CGPA | MES Abasaheb Garware College, Pune | 2015 – 2018
